INTERNSHIP PROJECT REPORT

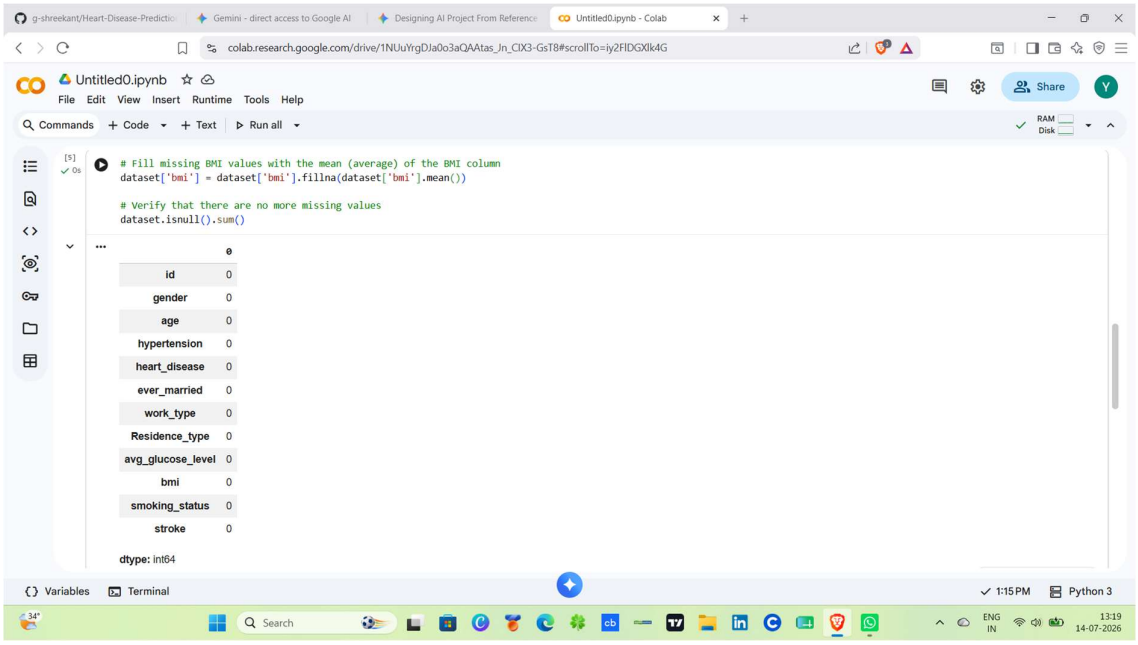

TOPIC: Stroke Prediction using machine learning

Submitted by: Gavidi Yogeswar

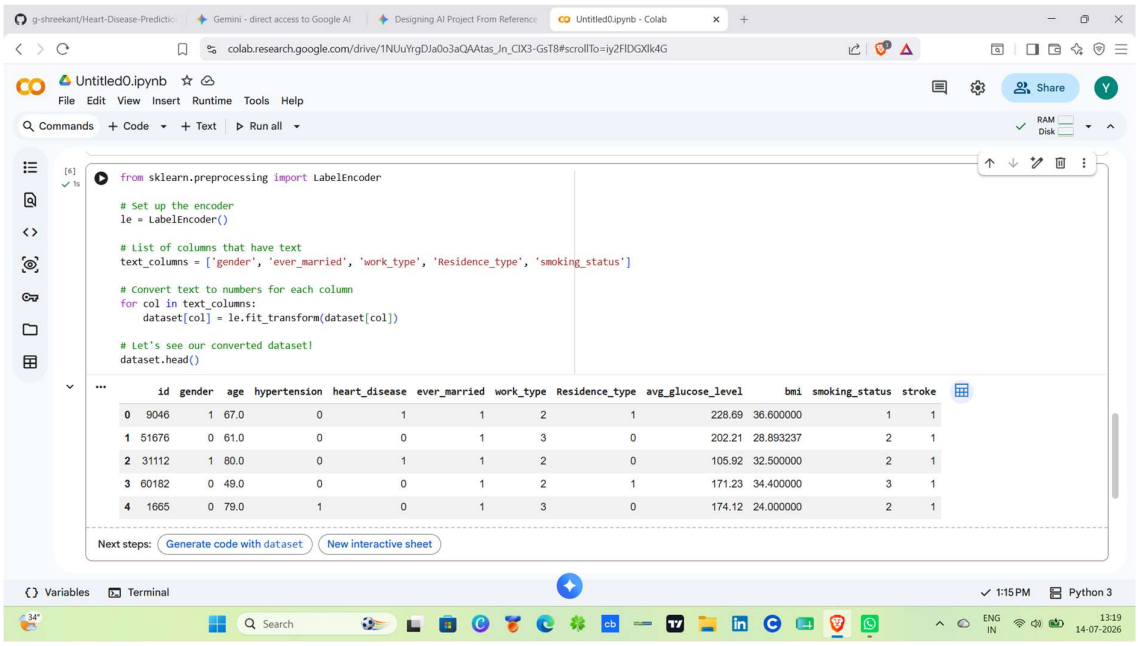

Step 1: Successfully loading the stroke dataset

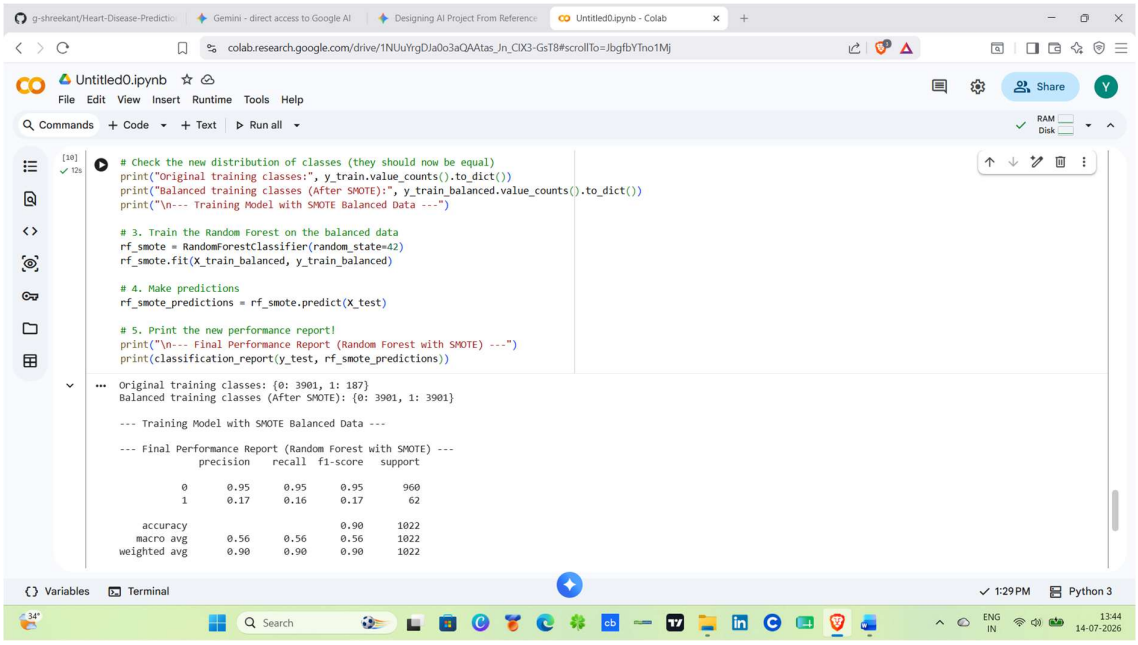

Step 2: Filling missing BMI data with the average (mean) value

Step 3: Converting text categories into numbers using LabelEncoder

Step 4: Using SMOTE to balance the dataset so the model can learn to predict actual stroke cases

Step 5: Final Evaluation Report of the Random Forest model showing successful stroke prediction
